

Polarity: How asymmetric the distribution of charges in an object are.\

Induced polarity: A non polar object shifts its charges in response to some other charge.

Dipole: a pair of opposite charges with some separation between them.

Net Charge: all charges added together

Van de Graff Generator!!!!

charges that are the same want to be as far away from each other as possible.

Ground

allows extra electrons to move off a surface or needed electrons to move onto the surface.
